Subject: Optional Shocks for Airflex® Axles

In keeping with our continual commitment to product innovation, Dexter Axle is pleased to announce the addition of optional shocks for Airflex® axles effective January 1, 2015.

Shock absorbers help to absorb and direct road force, damping wheel oscillation, jounce and rebound, which equates to a softer ride. Shocks help to absorb unpleasant effects of bumpy roads and unavoidable holes thus enhancing driver's control over the vehicle.

Please contact your Dexter sales engineer for ordering this shock option, or if you have additional questions.
