Subject: New Product Announcement - Hydraulic Cylinder for Inline King Pin Steer Axle

Dexter (legacy Ingersoll) is proud to announce an expansion of the inline king pin forced steer axle product line, with the addition of an installed hydraulic cylinder option.

You can now add a heavy duty off-the-shelf, double acting hydraulic cylinder to your inline king pin package. It is rated for 3,000 psi and comes with industry standard tie-rod ends, which are common with tie-rods on the basic inline kin pin axle. It has a customizable push rod length to handle any axle track you require. Get the full package and simplify your installation when you choose Dexter's fully integrated ISS suspension system.

Please contact your Dexter Heavy Duty Account Manager if you have additional questions or need further assistance.
