Subject: Upgrades to Dexter's DX Series E/H Actuators

Dexter is pleased to announce the following product upgrades to the DX Series E/H Actuators. These upgrades are designed to improve brake controller compatibility, response time, and circuit board protection. Below are these improvements:

- Built-in electric brake controller compatibility adapter eliminates the need to incorporate an external compatibility device.
- New piston-pump provides the industry's fastest response time to maximum hydraulic pressure shortening stopping distances.
- Built-in protection of the unit's circuit board from high voltage spikes from large on-board battery banks.

PART NUMBERS AFFECTED:

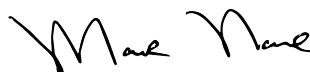

KIT NUMBER	DESCRIPTION
K71-650-00	ELECTRIC/HYDRAULIC BRAKE ACTUATION SERIES 1000 KIT - DRUM
K71-651-00	ELECTRIC/HYDRAULIC BRAKE ACTUATION SERIES 1600 KIT - DISC

These changes are currently available and do not require any type of special-order requirements.

Dexter's E/H actuators incorporating these improvements have serial numbers that begin with 1PV or 2PV. The image below shows where the serial number of the DX Series Actuator can be located.

Please contact your Dexter account manager for additional information and further assistance.
