

PRODUCT BULLETIN #496

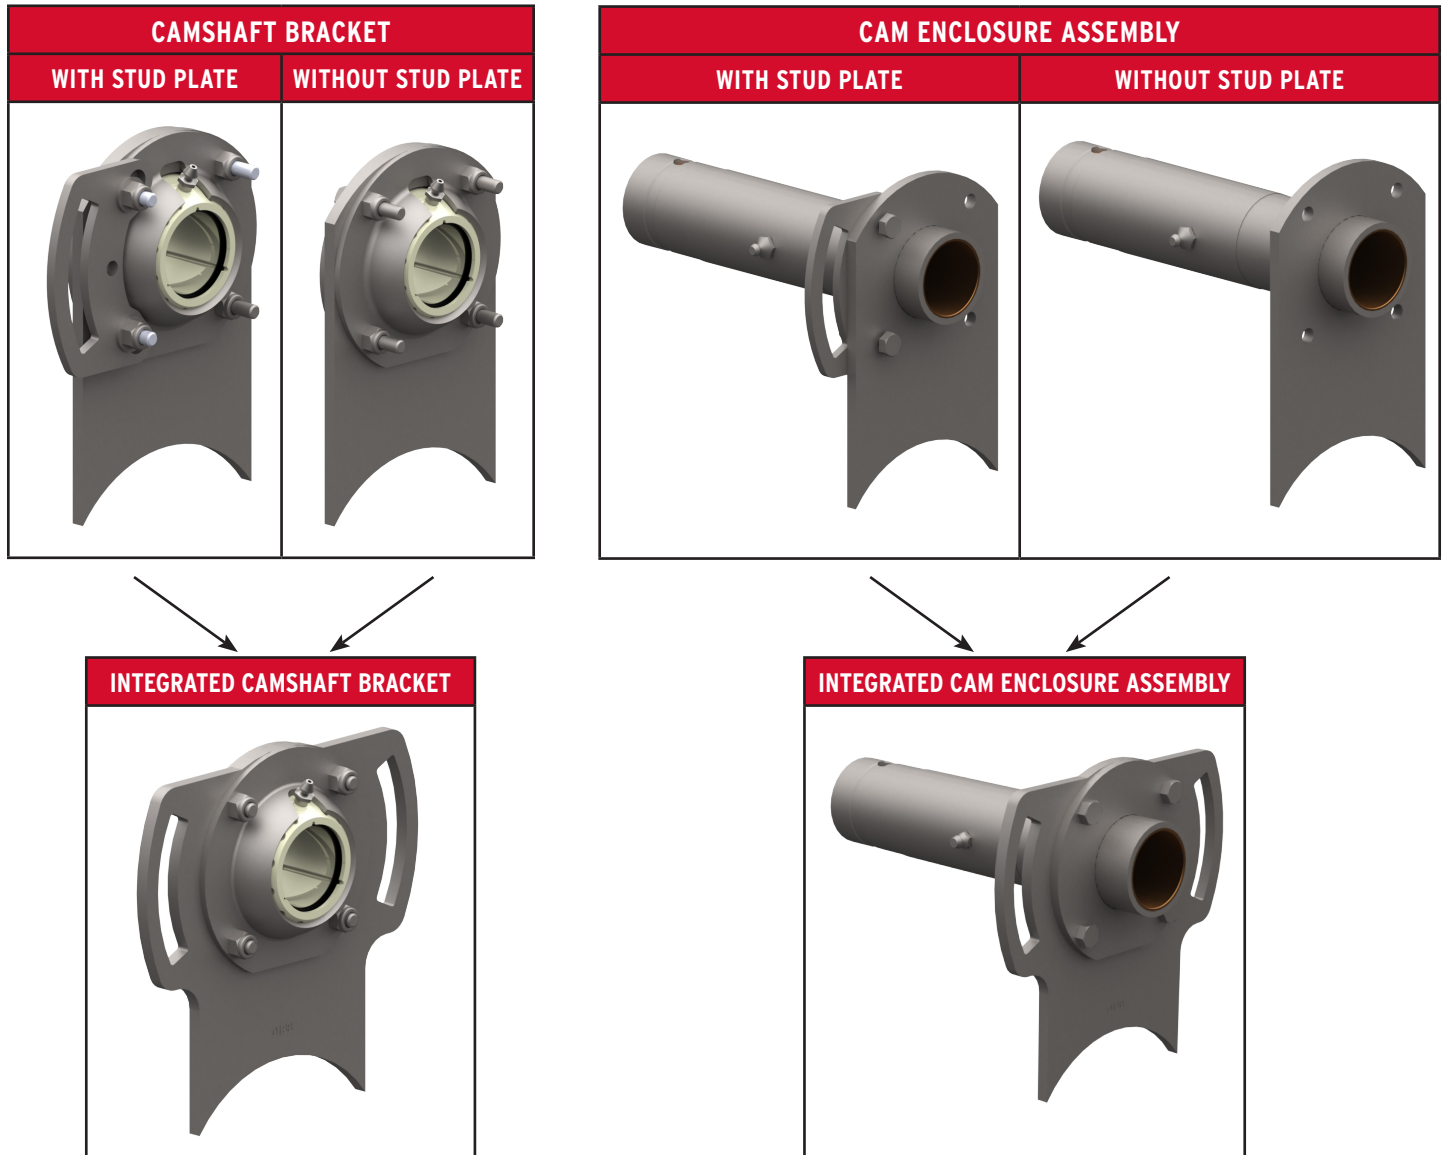

HEAVY DUTY CAMSHAFT BRACKET UPDATE

June 6, 2024

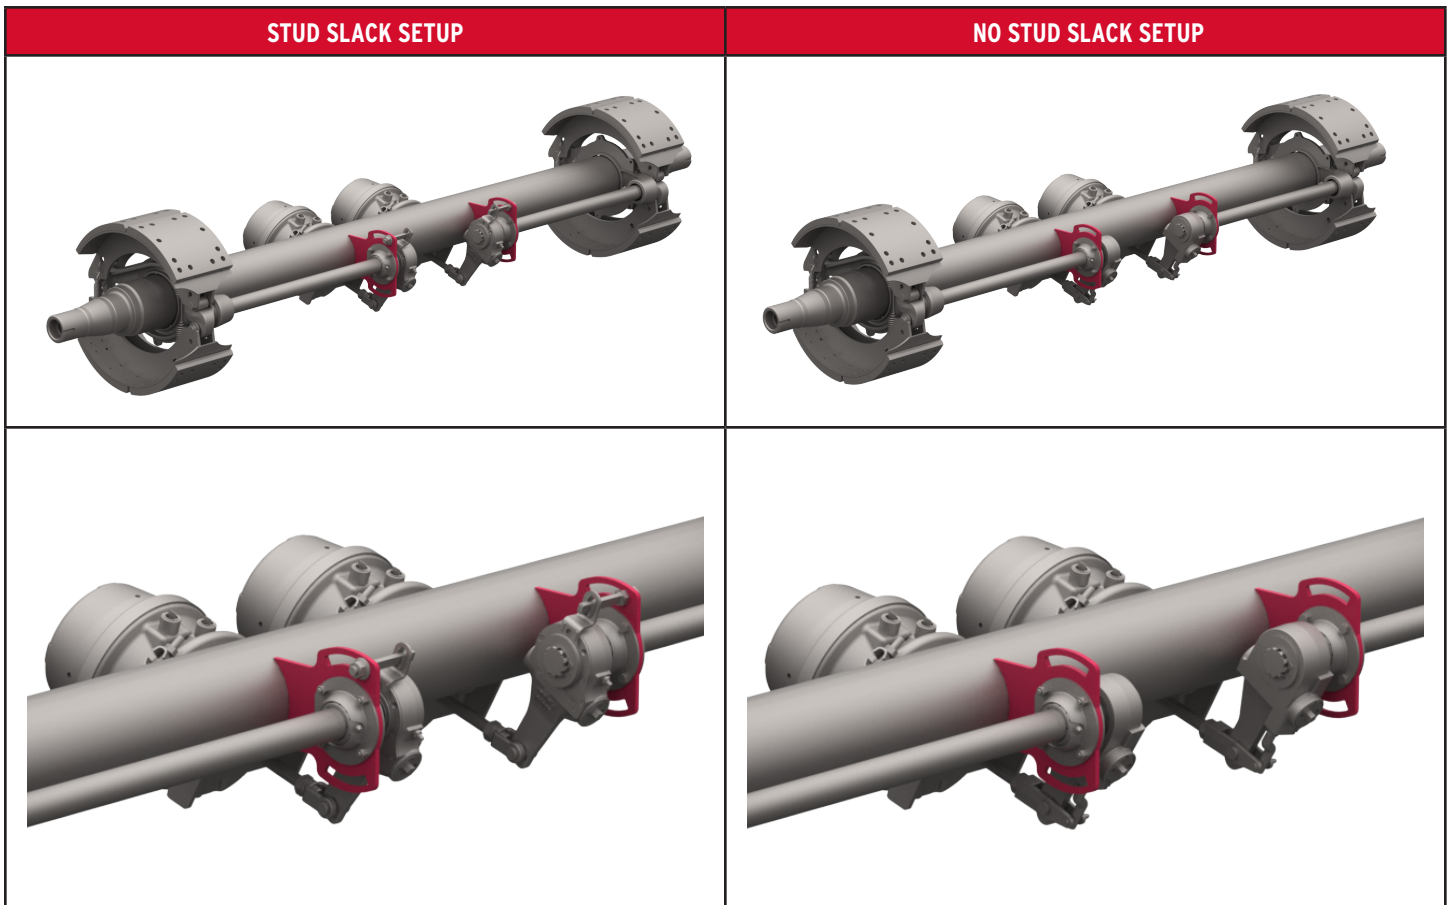

Dexter is pleased to announce two new product improvements for our heavy-duty drum brake standard axles produced in our Ingersoll, Ontario plant, allowing universal installation on all slack adjuster models. Instead of having multiple cam bracket part numbers for axles with and without this extra bracket, Dexter has integrated this feature into our new cam bracket and cam enclosure design.

This visual change does not affect the axle's fit, form, or function and the new brackets will work with all slack adjuster models. The change covers all brake sizes and axle tube diameters we offer. The new parts are backward compatible, so there will be no issues with replacement parts. Starting in June 2024, these new style parts will be rolled into production as our inventory allows.

For a list of affected part numbers please visit www.dexteraxle.com/camshaftupdate.
