MARINE EQUALIZERS WITH NYLATRON® BUSHINGS

October 9, 2025

Dexter is introducing a new line of equalizers engineered for the marine industry. These equalizers are built with superior-quality materials for robust durability. They feature Dexter's exclusive Gal-Dex® marine-grade coating, which has been rigorously tested to withstand over 500 hours of salt spray exposure, ensuring exceptional corrosion resistance in harsh marine environments.

The equalizers are also equipped with Nylatron bushings, which offer increased durability and quieter operation compared to traditional components.

Dexter has released two new equalizer models: 013-010-05 and 013-104-05. Designed to fit 1-3/4" double-eye springs, both models offer reliable compatibility and performance for a wide range of marine applications.
