## UPDATED KODIAK® 11" MEDIUM DUTY CALIPER AND PAD KITS

March 27, 2026

As part of Dexter's ongoing commitment to continuous improvement, we are refining the design profile of the Kodiak disc brake pads for 11" rotors used on 10K - 12K axle capacities. The updated pad profile more accurately matches the rotor radius, improving pad durability and enhancing overall braking performance.

Historically, customers used 13-inch pad kits in some 11-inch brake applications. With the introduction of the new 11-inch pad kit, there is now a dedicated solution for 11-inch applications, eliminating the need to use a 13-inch kit. Going forward, 11-inch pad kits should be used for all 11-inch rotor applications, and Dexter recommends these kits for current axles equipped with Kodiak 11-inch disc brakes already in the field.

There are no changes to the 13-inch Kodiak 10K-12K disc brake kits. Dexter recommends using the 13-inch pad kit exclusively with 13-inch rotors.
